PROFILE SUMMARY

Fresher AI Engineer with hands-on project experience building Retrieval-Augmented Generation (RAG) and LLM-powered applications, both deployed and publicly demoable. Currently completing an AI Engineer program (Datamites) covering the full ML/DL/NLP/GenAI stack. Comfortable across the Python data/ML stack and looking for an entry-level AI/ML Engineering role to apply and grow these skills.

SKILLS

Languages: Python, SQL (basics)

Machine Learning: Linear/Logistic Regression, KNN, K-Means, SVM, Decision Trees, Random Forest, Naive Bayes, XGBoost, PCA, Feature Engineering

Deep Learning: ANN, CNN, TensorFlow, Keras, Transfer Learning

NLP & Generative AI: Regex, TF-IDF, Word2Vec, RNN/LSTM, Transformers, BERT, GPT, LangChain, Retrieval-Augmented Generation (RAG), Agentic AI

Data & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Tableau, Power BI, Advanced Excel

Databases: MySQL, MongoDB, ChromaDB (vector DB)

Big Data: PySpark, Hadoop

Tools & Frameworks: Git, GitHub, Streamlit, Flask, Groq API, Ollama

PROJECTS

AI Interviewer + Career Assessment Platform | Python, Streamlit, Groq API, Whisper, LangChain

[Live Demo](#) | [GitHub](#)

- Built an AI-powered mock interview platform that automatically analyzes an uploaded resume and generates interview questions targeted to the candidate's specific listed skills and projects, adapting difficulty based on performance.
- Implemented scored answer evaluation across multiple dimensions — technical accuracy, communication clarity, and project-specific knowledge — for both typed and voice responses, using Groq Whisper for speech-to-text.
- Deployed the app publicly on Streamlit Community Cloud with secure API key management (environment secrets, never hardcoded), plus persistent session history and a concise final verdict with actionable improvement advice.

RAG-Based Document Analyser (PDF Risk Radar) | Python, Streamlit, LangChain, ChromaDB, Ollama (Llama 3)

[Live Demo](#) | [GitHub](#)

- Built a privacy-focused Retrieval-Augmented Generation app that lets users upload PDFs (e.g. legal or business documents) and ask natural-language questions, running entirely on local models with no external LLM API — chosen specifically to avoid sending sensitive documents to a third party.
- Used ChromaDB for vector storage and nomic-embed-text embeddings with a local Llama 3 (via Ollama) to ground answers strictly in the uploaded document.
- Added automatic detection of deadlines, risks/penalties, and legal obligations within uploaded documents, surfaced through a chat interface.

EDUCATION

Bachelor of Computer Applications (BCA) — Pragnya Degree College, Hyderabad *Result pending (expected ~8 CGPA)*

AI Engineer Program (in progress) — Datamites *10-month program (6 mo. training + 4 mo. project/internship)*

400+ learning hours covering Python, Statistics, Machine Learning, Deep Learning, NLP, and Generative & Agentic AI; currently in the project/internship phase.

Senior Secondary (Intermediate) — St. Martin's College *CGPA: 7.98*

Secondary School — ZPHS Miyapur *CGPA: 9.2*

ACHIEVEMENTS

- 1st place — PPT Presentation Competition (college-level)
- 1st place — Debate Competition (college-level)
- 2nd place — Quiz Competition (college-level)

CERTIFICATIONS

- AI Engineer — Course Completion Certificate, Datamites (in progress, expected upon course completion)
